

Introduction to Enterprise

MyGate's range of Enterprise solutions allows merchants to remain in complete control over the entire payment process. The cardholder is never required to leave the merchants environment. My Enterprise is a high performance TCP/IP payment solution that resides on the merchants server. You can build your own API and use a web service to access the MyGate server. The transaction details of the transactions are passed to the MyGate Payment Gateway from your website using web services. This is an efficient method of ensuring that any payment page is neatly under the control of an organisations website and an excellent way to micromanage even the smallest of details. When combined with SSL, a secure platform emerges which can be designed to work proficiently with any payment solution.

My Enterprise Overview

- ✓ Merchant hosts their own payment page
- ✓ The merchant is required to install SSL on their server
- ✓ The merchant controls each and every phase of the transaction
- ✓ The online payment integration is fully incorporated into an existing website
- ✓ Can be used for ecommerce, mobile commerce, MOTO and recurring transactions

API

Enterprise relies on web services for the processing of transactions. A web service is a software system designed to support interoperable machine-to-machine interaction over a network. It has an interface described in a machine-processable format (specifically WSDL). Other systems interact with the Web service in a manner prescribed by its description using SOAP messages, typically conveyed using HTTP with an XML serialization in conjunction with other web-related standards.

Transaction Management

Complete control of each and every phase of the transaction can be maintained from within the merchants application using enterprise.

System Intergration

Flexibility also extends to the capability to integrate with existing back end systems. Enterprise is simply a singular interface within the a larger enterprise eco-system, which may integrate with the following system types:

- ERP
- CMS
- Proprietary applications
- Shopping Carts
- CRM
- Financial
- Mobile
- Websites

This information is intended as a recommendation for particular products and services and recipients of this document shall make their own specific decisions. MyGate and the MyGate logo are registered trademarks of MyGate Communications (Pty) Ltd.

Manage Transaction types such as:

- Authorize
- Capture
- Authorize & Capture (Sale)
- Authorization Reversals
- Refunds / Credits

Association rules linked to Deferred Settlement and Authorization Reversals can be easily managed and maintained through the Enterprise API.
