## Overview

Within this document you will find a listing of the URL's for testing in the Sandbox environment and for live processing.

## Testing URL's

Testing URL's are used to access the Sandbox environment. Sandbox URL's will only work with a merchant and application ID's that were created when you registered in the Developer Centre.

## Live Processing URL's

Live processing URL's are used to access MyGate's live environment. Only merchant and application ID's that have been issued by MyGate that are linked to an internet merchant account can be used for live processing.

## Integration Methods

Different integration methods may require a different URL for processing. For example, if you had a My Virtual and My Enterprise solution with MyGate, you would be required to use two separate URL's.
